

# Solar Planner App BY NOVOTHINK

## Novothink has developed the Solar Planner App

as a free resource for our licensed solar charging cases, the SURGE, specifically designed for the iPhone 3G / 3GS and iPod touch 2nd generation. The NOVOTHINK Solar Planner provides an estimate of how much time you need to expose your Surge to the sun to maintain the battery level of your iPod touch or iPhone.

Your ideal tool to estimate your solar charging needs for your everyday use and outdoor adventures. Power up one ray at a time while hiking, biking, camping or traveling anywhere!

Please note that the time result is an estimate, not an exact measurement. The amount of charge collected by the Surge will vary with weather conditions, time of day, time of year, and geographic location, among other factors. The time will also be influenced by the settings on your iPod or iPhone, like the brightness of the backlight, whether push notifications are enabled, etc.

The Solar Planner assumes that the Surge and your iPod or iPhone start off fully charged and no USB charging takes place during the trip.

Go Green...Go Solar!

# Juicing Up Your iPhone & iPod touch One Ray at a Time

using the Solar Planner App from NOVOTHINK
